

Cloud Backend Software Engineer 2013

If you are looking for doing something that can have a paradigm shift impact, something that is on a forefront of mobile technology, the one that would keep challenging you and your ability to deliver, we would love to talk to you.

Your capacity would include development and design structure and component backend module of our high capacity Cloud based application and infrastructure. Everything from mobile browser to desktop browser program. You would work and design with the latest generation mobile peer to peer framework with hybrid cloud backend.

Responsibilities:

- Responsible in oversee the design, code the UI and Backend sub system for a mobile and web distributed cloud application architecture.
- Work hand in hand with UX designer team, and additional feedback from real world user to create the most suitable application for browser platform
- Work together with production and quality assurance team to deliver the high availability scaling web and mobile backend infrastructure

Basic things we looking for:

- Initiative and can become leader material in high responsibility high performance teamwork
- Basic knowledge in any of the following language: C, Objective-C, C++, or Java
- Have basic database knowledge either SQL or non-SQL based
- Have experience coding web application using combination of HTML/CSS/Javascript
- Have good read/write English proficiency
- Like to learn and challenge
- Pass all military requirements.

What would you become? if you join us:

- You would become excellent in all software development on backend development
- You should have highly capable knowledge of how to design backend architecture, how to use design pattern and proper object oriented design trick to decouple the module and help push to better design
- Full understanding of technology and how we can build distributed data system.
- You should be able to design and create the infrastructure of any mobile service from front end to backend, and all the factors related from distributed database to how to load balance the mobile service.
- You can breath and live comfortably with HTML5, CSS, and Javascript

Little things you should know about our development team:

- We work on flex time flex dress basis, and we do care about meeting deadline more than when you come to work.
- We love to work together as a team, and part of our team process is about catch others when they fell.

- We love to look at the bright side of everything in the world with humor, and we hope you are too.
- We work hard and play hard, and can be geek at any time.
- We do not have any cubicle in our office to foster the team communication.
- Our primary hobby are all sort of discussion from technology, gadget, business, marketing, finance, or love lost.
- Our secondary hobby are playing board game, tarrot, taking a picture, planning the trip, and find something good to eat in town.
- QA is god here.
- Our monday evening is Badminton day, and Friday evening is the going out trip for good food.

Something that we would love that you have or got an experience (this is optional, you will know about it anyway if you join us).

- Love to discuss on all sort of technologies
- Know how to program in event based programming paradigm
- Know any of the following databases or technologies: Mongo DB, Redis, Couch DB, Node.js, MySQL cluster. You should also know which technology would be suitable to what situation.
- Knowing how to use design pattern in any language.
- Understand what is the different between dynamic language and static language
- Have some experience in writing program on Node.js or other Web framework
- Have experience using source code control
- Unit test
- Have used just-in-time or agile development approach
