

## Web Development Engineer 2014

If you are looking for a web development job that would be a forefront of web technology, the one that have been calling out for you, the one that would keep challenging you and your ability to deliver, we would love to talk to you.

Your capacity would include web application design and development for our high capacity Cloud based application. You would work and design with the latest generation mobile peer to peer framework with hybrid cloud backend.

### Responsibilities:

- Work hand in hand with UX designer team, and additional feedback from real world user to create the most suitable application for browser platform
- Work together with cloud backend engineer team to deliver the web application of SaaS platform for enterprise users

### Basic things we looking for:

- Strong analytical skill
- Have experience in web development
- Basic knowledge in any of the following language: Javascript, PHP, Ruby, ASP, JSP or other web programming languages
- Have experience coding web application using combination of HTML/CSS/Javascript
- Any experience with Node.js or Javascript framework (Backbone, JQuery, etc.) would be advantage
- Have basic database knowledge either SQL or non-SQL based
- Have good read/write English proficiency. At least you should be able to read API documentation, right?
- Like to learn and challenge
- Pass all military requirements.

### What would you become? if you join us:

- You can breath and live comfortably with HTML5, CSS, and Javascript
- You would become excellent in all software development on web application development
- You should have highly capable knowledge of how to design web application, how to use design pattern and proper object oriented design trick to decouple the module and help push to better design

### Little things you should know about our development team:

- We work on flex time flex dress basis, and we do care about meeting deadline more than when you come to work.
- We love to work together as a team, and part of our team process is about catch others when they fell.
- We love to look at the bright side of everything in the world with humor, and we hope you are too.
- We work hard and play hard, and can be geek at any time.
- We do not have any cubicle in our office to foster the team communication.
- Our primary hobbies are all sort of discussion from technology, gadget, business, marketing, finance, or love lost.

- Our secondary hobbies are playing board game, tarrot, taking a picture, planning the trip, and find something good to eat in town.

- QA is god here.

- Our Monday evening is Badminton day, and Friday evening is the going out trip for good food.

Something that we would love that you have or got an experience (this is optional, you will know about it anyway if you join us).

- Love to discuss on all sort of technologies

- Know how to program in event based programming paradigm

- Know any of the following databases or technologies: Mongo DB, Redis, Couch DB, Node.js, MySQL cluster. You should also know which technology would be suitable to what situation.

- Knowing how to use design pattern in any language.

- Understand what is the different between dynamic language and static language

- Have some experience in writing program on Node.js or other Web framework

- Have experience using source code control

- Unit test

- Have used just-in-time or agile development approach
